Athens, GA · orumpatisuryateja@gmail.com · (706) 380-4325 · [linkedin.com/in/suryatejaorumpati](https://www.linkedin.com/in/suryatejaorumpati) · github.com/orumpatisuryateja99 · [Suryateja Portfolio](#)

PROFESSIONAL SUMMARY

Passionate software engineer and MS CS candidate at the University of Georgia who thrives on turning complex problems into clean, scalable systems. Experienced shipping production-grade full-stack applications, designing RESTful APIs, and building ML pipelines from a live multi-API climate analytics platform powered by Google Gemini to a CNN deep learning system that surpassed published research benchmarks. Driven by genuine curiosity for how software works at every layer: backend architecture, API design, model training, and front-end delivery. Equally comfortable diving into system design trade-offs, optimizing data pipelines, or prototyping AI-powered features. Seeking new grad Software Engineer roles where strong fundamentals, hands-on project depth, and a bias toward building can make an immediate impact.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, C

Web / Backend: Flask, REST APIs, RESTful Web Services, Node.js (basics), HTML5, CSS3, JSON, Chart.js

Databases & Cloud: SQL, PostgreSQL (learning), Google Cloud APIs, AWS (fundamentals)

ML / AI: TensorFlow, Keras, CNN (ResNet50, VGG19, DenseNet169, Inception-v3), SAM, Google Gemini API

Developer Tools: Git, GitHub, VS Code, Postman, Agile / Scrum

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Client-Server Architecture, API Design

WORK EXPERIENCE

Software Engineering Intern [\[Live\]](#) [\[GitHub\]](#) Jul 2023 – Sep 2023

VIVA FIT

Remote, India

- Built a responsive class-scheduling web app using HTML5, CSS3, and JavaScript, centralizing the full weekly class catalog into a single interface and eliminating manual coordination touchpoints for operations staff.
- Integrated Google Calendar API end-to-end, implementing OAuth-based user authorization and real-time class booking through external web services, replacing a fully manual scheduling process.
- Delivered production-ready, brand-aligned UI components in collaboration with the design team, shipping the full interface on schedule for public launch within the three-month internship window.

PROJECTS

ClimateAI | Multi-Source Climate Chatbot [\[Live\]](#) [\[GitHub\]](#)

Aug 2025 – May 2020

Python, Flask, REST APIs, Google Gemini API, HTML/CSS/JS, Chart.js

- Architected a full-stack NLP-driven climate app routing natural-language queries across 4 government REST APIs (NASA Daymet, NOAA, OpenWeather, GeoNames), consolidating 45 years of climate data with structured data routing and response normalization.
- Engineered a Python/Flask backend with 6 time-window analysis modes and 5-city simultaneous comparison support using structured mode-based aggregation and clean REST endpoint design.
- Delivered a front-end analytics dashboard with Chart.js rendering 9 climate variables, a 7-metric statistical panel, per-source provenance labels, and one-click CSV/PDF export for reproducible analysis.

Weed Classification System | Deep Learning Pipeline

Aug 2023 – Jan 2024

Python, TensorFlow, Keras, ResNet50, Inception-v3, DenseNet169, VGG19, SAM

- Designed and benchmarked a CNN image classification pipeline on 17,509 images across 4 architectures, achieving 97% accuracy with ResNet50 and surpassing the published DeepWeeds benchmark of 95.7% by 1.3 percentage points.
- Integrated Meta's Segment Anything Model (SAM) for automated data augmentation, reaching 98% IoU on segmentation masks and improving downstream classification precision over standard baselines.
- Built a structured evaluation framework reporting accuracy, precision, recall, and F1 score across all 4 architectures to support evidence-based model selection for precision agriculture deployment.

EDUCATION

University of Georgia

Athens, GA

Master of Science, Computer Science | GPA: 3.85/4.0

Aug 2024 – May 2026

National Institute of Technology Karnataka (NITK)

India

Bachelor of Technology, Information Technology | GPA: 3.21/4.0

Jul 2020 – Jun 2024

ADDITIONAL

- Solved 214+ problems on LeetCode (200-day streak badge, 2025) and 300+ on GeeksForGeeks, strong applied DSA practice.
- Ranked 3,198 out of 1.5 million applicants in JEE Mains 2020 (top 0.2%), demonstrating exceptional analytical ability.
